d-Rain Joint Pavement Rainwater Filtration System

Posted by [Green Builder Staff](#)

Feb 14, 2016 7:50:21 AM

This stormwater solution from Bio-Microbics, Inc. keeps rainwater from pooling on impervious surfaces such as concrete and asphalt. Installed in standard expansion joints, this ADA-compliant drainage channel system is less than one inch wide, but provides a hydraulic filtration rate of 2 gallons/minute per linear foot. Made from aluminum alloy, d-Rain Joint is affordable and durable and has a longer lifespan than other options.
